IMPROVEMENT OF CHILD AND COMMUNITY NUTRITION
ESTABLISHMENT OF PAK-KOREA NUTRITION CENTRE

Food
od is any substance consumed to provide nutritional support for an organism.
is usually of plant or animal origin, and contains essential nutrients, such as
rbohydrates, fats, proteins, vitamins, or minerals.
here are three main groups of constituents in foods: Carbohydrates, Protein and
ats and derivatives of these.
he essential substances contributed by our food are called nutrients.
f these nutrients are not present in our food in sufficient amounts, the result is ill
ealth and in some cases, even death.
Food also contains many substances, which are non-nutrients e.g. coloring, and
flavoring substances in food.
Food is therefore, a complex mixture of different nutrients and non-nutrients.
